

J&J Technology Consulting

The J&J Technology Consulting team is comprised of highly skilled individuals focused on client satisfaction. The extensive knowledge within the team allows for specialized expertise, no matter what the project needs may require.

We offer network solutions to meet your needs. From ground up network topology design, to simple server migration, rotation and/or addition, we help you manage your network and apply our experience to help you succeed.

Our team also has extensive experience in application development. By utilizing industry standard development tool sets, we customize applications to your specifications and provide detailed documentation along the way.

Jose Cardenas, founder of J&J Technology Consulting, has had over 14 years of experience installing, trouble shooting and developing a wide array of computer related materials and applications.

Graduating from the DeVry Institute of Technology in 1995 with a Bachelor's Degree of Science in Electronic Engineering Technology, Jose, already with three years worth of technical related experience under his belt, expanded his experience to include project management.

Having had hands on experience developing both hardware and software, Jose continued to dedicate time to stay current on new product developments and the associated technologies. Soon he was leading others in supporting the technologies utilized by a company that would grow to over 500 employees.

Currently Jose uses his vast technical and managerial expertise to create and implement enterprise-wide projects, providing detailed documentation and ushering in a new age of innovation.

"Your Technology Solutions Partner"

J&J Technology Consulting team would like to partner with your organization in driving your initiatives, strategies, and operations based projects. We'll work hand in hand in planning, implementing, and cross-training with your existing team, or as a turn-key solution.
